### INNOVATIVE FEATURE

#### Smooth & Simple Angle Adjustment

Angle can be adjusted with the child in the standing frame, and is easily set using the angle gauge on the frame. Frame can be tilted to be completely horizontal, aiding transfers when used in supine. Concentrate on safe transfers first then positioning second.

This highly versatile standing frame is suitable for children from around **9 Months** right up to **13 Years** across 2 sizes and provides highly supportive standing in prone, supine or upright.

An unrivalled amount of adjustment for height and width and a maximum user weight of 132LBS on the Size 2, make the Multistander the perfect choice for growing children in multi-use environments. Smooth and easy angle adjustment takes the Multistander from horizontal right through to upright, facilitating easy transfers in supine and unlimited scope for setting the precise standing angle required for every child.

The Multistander has a wide variety of head, trunk, leg and foot support options to enable you to exactly customize the support to any individual user. The deliberately open design ensures you can always see precisely how the user is positioned each and every time. The capacity for outstanding thoracic and pelvic support, coupled with highly adjustable leg positioning options, make the Multistander a great option for almost every child. If you need flexibility the Jenx Multistander has got it!
